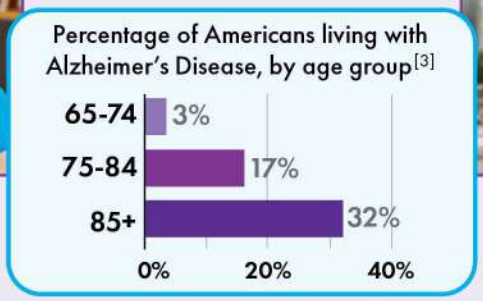
Let's talk about DEMENTIA

> In 2021, an estimated **6.2 million Americans** age 65 and older are living with **dementia,** growing to **13.8 million** by 2060, barring the development of medical breakthroughs...[1]

DID YOU KNOW? For those older than 60 years, the risk of dementia is closely related to the severity of hearing loss.

The risk is greater with a hearing loss of more than 25 dB, when verbal communication starts to be impaired.[2]



RESEARCH INDICATES Social isolation, issues with shared brain function pathways and hearing loss-related sensory overload may be important risk factors.[4]
